

HolarHR

Enterprise Workforce Attendance SaaS — User Guide

Deployed at: <https://holarhrattendance.vercel.app>

1. Overview

HolarHR is a multi-tenant workforce attendance and management platform. It serves organizations of all sizes — from small teams to large enterprises — with role-based access control, shift tracking, leave management, attendance reporting, AI-powered insights, and billing integration with Stripe & Paystack.

2. Features by Plan

Feature	Free	Starter	Business	Enterprise
Max Employees	3	25	250	99,999

3. All Features

Multi-Tenant Architecture

Each company gets an isolated workspace with its own employees, departments, branches, and data.

Role-Based Access Control

Five roles: SUPER_ADMIN, COMPANY_ADMIN, HR_MANAGER, DEPARTMENT_MANAGER, EMPLOYEE. Granular permissions per page and API.

Attendance Tracking

Clock in / clock out with late detection, shift-based calculations, early clock-out reason required. Daily unique constraint per employee.

GPS Geofenced Attendance

BUSINESS+ Browser geolocation on clock-in/out validates the employee is within a configurable grace zone (default 10m, adjustable in Settings). Uses Haversine distance calculation.

Mobile Fingerprint (WebAuthn)

BUSINESS+ Register your device's fingerprint/face unlock via WebAuthn API and clock in/out with a single tap. Works on any device with biometric sensor — no external hardware needed.

Biometric Devices

BUSINESS+ Manage physical fingerprint scanners (e.g., ZKTeco). Add devices, enroll employees, import attendance from devices. Plan limits: Business 5, Enterprise 99.

Break Management

Track lunch and other breaks during the workday. Duration auto-calculated.

Shift Management

Configure morning, evening, or custom shifts with grace periods, working hours, and branch association.

Leave Management

Submit leave requests (Sick, Annual, Personal, Maternity, Paternity, Other). Approval workflow by managers. Notifications on submission.

Reporting & Analytics

Daily, weekly, monthly summaries. Filter by department or branch. EMPLOYEE role sees own records only.

AI-Powered Insights

ENTERPRISE Natural-language HR chat and attendance insight generation via OpenAI.

Departments & Branches

Organize your workforce by department (Engineering, HR, Marketing, etc.) and branch (HQ, remote offices). Branches support GPS coordinates for geofencing and are editable/deletable inline (deletion blocked if employees assigned).

Employee Management

Full CRUD with plan limit enforcement, search, filtering. Employee creation auto-generates a user account with a temporary password. Assign employees to a Branch and Shift directly from the add/edit form. View device enrollment count per employee.

Branch GPS Coordinates

Set latitude/longitude per branch via the inline edit form or "Use My Location" button. Used as the anchor point for GPS geofence validation on clock-in.

Settings — GPS Grace Zone

Configure per-tenant GPS grace zone distance (in meters) from the branch's GPS coordinates. Employees must be within this radius to clock in/out. Accessible from the Settings page.

Notifications

Real-time (10s polling) notification bell with unread badge. Automatic notifications on leave requests and other events.

Password Management

Forgot password flow with reset token. Admin/HR can reset employee passwords from the employee list (temp password shown via toast).

Billing (Stripe)

Checkout, webhook, customer portal. Plans synced with Stripe price IDs.

Billing (Paystack)

Alternative payment provider for NGN currency. Mock mode available for local development.

Company Settings

Company profile, logo upload (stored as base64 in DB — no filesystem), GPS grace zone configuration, plan management.

Profile Page

Personal details edit and password change from a dedicated profile page.

Admin Panel

SUPER_ADMIN Full system overview: manage tenants (companies), users, view plan distribution and stats.

Inactivity Cron

Automated company lifecycle: 3mo inactive → marked INACTIVE, 6mo → warning, 12mo → scheduled deletion.

Marketing Landing Page

Public-facing site with Home, Features, Pricing, About, Contact sections.

Responsive UI

Mobile-friendly sidebar with hamburger toggle, accessible on all screen sizes.

Security

JWT sessions, RBAC on all API routes, middleware protection, secure password hashing (bcryptjs).

4. Test Accounts

All accounts use the password `password123`.

Email	Role	Access
<code>admin@holarhr.com</code>	SUPER_ADMIN	Full system access + /admin panel
<code>admin@acme.com</code>	COMPANY_ADMIN	Acme Corp company owner — all settings, billing
<code>hr@acme.com</code>	HR_MANAGER	Employee management, attendance, reports, AI

Email	Role	Access
manager@acme.com	DEPARTMENT_MANAGER	Department oversight, attendance, reports
john@acme.com	EMPLOYEE	Self-service: own attendance, reports, leave

5. Getting Started — After Sign Up

Follow these steps after registering your company account:

1

Log In

Go to <https://holarhrattendance.vercel.app/login> and sign in with your email and password. Use one of the test accounts above, or register a new company at </register>.

2

Complete Your Company Profile

Navigate to **Settings** → update company name, email, phone, address, and GPS grace zone distance. Upload your company logo (PNG/JPG/SVG, max 400KB).

3

Create Departments

Go to **Departments** → click **Add Department**. Create departments like Engineering, Human Resources, Marketing, Sales, etc.

4

Create Branches (with GPS)

Go to **Branches** → click **Add Branch**. Add your office locations with GPS coordinates (latitude/longitude). Use the **Use My Location** button to auto-fill from your current position. Branches can be edited inline or deleted (deletion blocked if employees are assigned).

5

Define Shifts

Go to **Shifts** → click **Add Shift**. Set shift name, start/end time, grace period

(minutes), and optionally assign to a branch. Example: Morning 08:00–17:00, grace 15 min.

6

Add Employees

Go to **Employees** → click **Add Employee**. Fill in employee details (first name, last name, email, phone, position, salary). Assign them to a Department, Branch, and Shift via dropdowns. View device enrollment count per employee. A user account is automatically created with a temporary password. HR/Admin can reset an employee's password from the row actions menu.

7

Manage Attendance (with GPS)

Go to **Attendance** → click **Clock In** to start tracking. Your browser will ask for location permission — this validates you are within the GPS grace zone of your assigned branch. Use **Clock Out** at the end of the day (early clock-out requires a reason). Use **Start Break** / **End Break** to track breaks. View attendance status (Present, Late, Absent, Half-day, Leave) in the dashboard.

8

Use Mobile Fingerprint Clock-In **BUSINESS+**

Go to **Attendance** → in the **Today's Activity** card, tap **Register** next to "Mobile Fingerprint". Your device will prompt you to scan your fingerprint or face. Once registered, use the **Fingerprint Clock-In** / **Fingerprint Clock-Out** button to record attendance with a single biometric tap — no manual clock-in needed. You can register multiple devices (e.g., phone + tablet) by tapping **Add Device**.

9

Manage Biometric Devices **BUSINESS+**

Go to **Devices** → click **Add Device** to register a physical fingerprint scanner (name, serial number, IP address, location). From the Employees page, edit an employee and use the **Enroll on device** dropdown to link them to a device.

Attendance can be imported from devices via the API at

`/api/attendance/device` .

0

Submit & Approve Leave

Employees: Go to **Leave** → **Request Leave** → select type, dates, reason.

Managers: Approve or reject pending requests. Notifications are sent automatically.

1

View Reports

Go to **Reports** to see daily, weekly, and monthly attendance summaries. Filter by department or branch (HR and above).

2

Explore AI Insights ENTERPRISE

Enterprise plan only. Go to **AI Insights** to ask natural-language questions about your workforce data or use the HR chat assistant.

3

Manage Billing

Go to **Billing** to view your current plan, upgrade via Stripe or Paystack, or access the customer portal.

4

Profile & Settings

Click your avatar (top-right) → **Profile** to edit personal details or change password. Use **Sign Out** from the same menu when done.

Note for SUPER_ADMIN: After logging in as `admin@holarhr.com`, click **Admin Panel** in the sidebar to access the system-wide admin dashboard where you can manage all companies (**Tenants**), view all users, and see system statistics.

7. Page Directory

Page	URL	Description
Home / Landing	/	Marketing site with Features, Pricing, About, Contact
Login	/login	Sign in with email and password
Register	/register	Create a new company account
Forgot Password	/forgot-password	Request password reset link
Dashboard	/dashboard	Main overview with attendance summary
Attendance	/attendance	Clock in/out (manual & fingerprint), view history
Attendance Status	/attendance/status	Today's attendance status
Employees	/employees	Manage employees (HR+) — includes branch/shift assignment and device enrollment
Departments	/departments	Manage departments (HR+)
Branches	/branches	Manage branches (HR+) — GPS coords, inline edit/delete
Shifts	/shifts	Manage shifts (HR+)
Devices	/devices	Manage biometric devices (MANAGER+) — add, edit, delete
Leave	/leave	Submit and manage leave requests
Reports	/reports	Attendance reports and summaries
AI Insights	/ai	AI-powered HR chat (Enterprise)
Billing	/billing	Plan, payments, invoices (Admin)

Page	URL	Description
Settings	/settings	Company profile and logo (Admin)
Profile	/profile	Personal details and password change
Admin Panel	/admin	System dashboard (SUPER_ADMIN)
Admin Tenants	/admin/tenants	Manage all companies (SUPER_ADMIN)
Admin Users	/admin/users	View all users (SUPER_ADMIN)

8. Key Concepts

Multi-Tenant

Each registered company is a separate **tenant** with its own isolated data. Users, employees, departments, branches, shifts, attendance records, and leave requests are scoped to a single company. A SUPER_ADMIN can oversee all tenants via the Admin Panel.

Employee ↔ User Relationship

When an HR manager creates an Employee record, a corresponding User account is automatically generated with a temporary password. The User enables login; the Employee holds HR data (position, salary, department, etc.). They are linked via `employeeId`.

Attendance Rules

An employee can have at most one attendance record per day (enforced by unique constraint on `employeeId + date`). Clocking out early requires a mandatory reason. Late arrival is calculated against the assigned shift's start time plus grace period.

GPS Geofence

When a branch has GPS coordinates set, clock-in/out requests include the employee's browser geolocation. The Haversine distance between the employee's location and the branch's coordinates is calculated. If the distance exceeds the company's **GPS Grace Zone** (set in Settings, default 10m), the clock-in/out is rejected. This ensures employees are physically present at the office.

Mobile Fingerprint (WebAuthn)

Uses the WebAuthn (Web Authentication) standard to register and verify biometric credentials (fingerprint, Face ID, Windows Hello) directly in the browser. No external hardware, SDKs, or third-party services needed. Credentials are stored per-employee, and each credential has a monotonically increasing counter to detect cloned authenticators. Available on Business+ plans. Employees register from the **Attendance** page and can add multiple devices.

Biometric Devices (Physical Scanners)

For organizations using physical fingerprint scanners (e.g., ZKTeco), HolarHR provides a **Devices** management page. Devices are tracked by name, serial number, IP, and location. Employees can be enrolled on multiple devices via the employee edit form. Attendance data can be imported from devices through the `/api/attendance/device` API endpoint. Plan limits: 5 devices on Business, 99 on Enterprise.

Notifications

Notifications are created server-side (currently on leave request submission). The bell icon in the navbar polls every 10 seconds for new notifications. Unread count shows as a badge. Clicking a notification marks it as read.

Billing Providers

Two payment providers are integrated: **Stripe** (USD, global) and **Paystack** (NGN, Nigeria). Paystack has a mock mode for development (`PAYSTACK MOCK=true`). Billing is configurable per plan.
